

WEBSITE PROJECT OVERVIEW

GPS Ushering and Events

A plain-language summary of what has been built so far, what still needs to come from you, and the plan for putting the site online.

1. What's Been Built So Far

Your website is built and working. It has seven pages, all styled in your brand colours (black, gold, burgundy/wine and white), fully mobile-friendly, and with a light/dark mode switch guests can toggle in the top menu.

- **Home** — introduction, service highlights, gallery preview, testimonials, and a call to book.
- **About Us** — your story, mission/vision, and why clients choose you.
- **Services** — all nine service types (weddings, corporate events, funerals, conferences, birthdays, concerts, churches/schools, brand activations, custom events) with details on what each includes.
- **Gallery** — a filterable photo grid by event type, with a click-to-enlarge view.
- **Testimonials** — client quotes and ratings.
- **FAQ** — answers to the questions clients ask most.
- **Book Us** — a booking/inquiry form, your contact details, a WhatsApp chat button, and an interactive map guests can click or drag a pin on to set their event venue, which fills in the location field automatically.

Every page currently uses **placeholder details** (a sample phone number, email, address, and photo icons instead of real pictures) so the design could move forward without waiting. Section 3 lists exactly what needs to replace these before the site goes live.

One admin panel, for everything

Beyond the public pages, a single private admin panel was built so you can manage the site yourself once it's live, without needing a developer for routine updates. It lives on its own web address (e.g. *admin.gpsusheringandevents.com*) separate from the main site, behind one login, and covers:

- **Bookings** — every request submitted through the Book Us form lands here. You can see each enquiry's details and mark it as New, Contacted, Confirmed, Completed, or Cancelled, so nothing gets lost in email or WhatsApp chats.
- **Services, Gallery, Testimonials & FAQ** — add, edit, or remove entries through simple forms, including uploading real photos straight from your phone or computer.
- **Site Settings** — your phone number, email, address, and social media links, all in one place, updating everywhere on the site the moment you save.

Nothing here requires git, GitHub, or any technical know-how — it works like any ordinary website login and form.

2. What Still Needs to Come From You

These are the real pieces of information the placeholders are standing in for. Nothing about the site's design or structure needs to wait for these — they can simply be dropped in.

ITEM	WHY IT'S NEEDED	STATUS
Real phone / WhatsApp number	Used for calls, the WhatsApp chat button, and the booking form	NEEDED
Business email address	Shown on every page and used for the "mailto" contact link	NEEDED
Exact business address / location	Shown on the Book Us page's contact details and used for local SEO	NEEDED
Logo file (if you'd like your existing logo used)	Currently a styled "G" monogram stands in for it	NEEDED
Real event photos and videos	Replaces the gallery's placeholder tiles	NEEDED
Facebook / Instagram / TikTok links	Currently placeholder links in the header and footer	NEEDED
Final domain name choice	See Section 3 for suggestions	NEEDED

Once these are in hand, they can be added directly through the admin panel — no need to send them to a developer to edit code.

3. Hosting & Domain Plan

The site needs a place to live on the internet (hosting) and an address for people to type in (a domain name). Here is the recommended setup and why:

Hosting

- **Railway** — hosts the entire site: every public page, the Book Us form, and the admin panel all run as one service. Railway has a free/low-cost tier well suited to a site this size.
- **Cloudflare** — used for the domain's DNS (and its free security/performance benefits), pointing at the Railway service.

Keeping everything as one service keeps things simple to run and maintain, while still giving a real, dedicated place to manage booking enquiries — rather than them only existing as emails or WhatsApp messages that can get buried.

Domain Name Suggestions

A domain still needs to be purchased and its availability confirmed at the time of registration (domain availability changes constantly, so please double-check before purchasing):

OPTION	NOTES
gpsusheringandevents.com	Exact match to your business name — recommended first choice, and the name already used throughout the site's behind-the-scenes settings.
gpsushering.com	Shorter and easier to type/say aloud, while still clearly tied to your brand.
gpseventsgh.com	Signals a Ghanaian business while keeping the trust and simplicity of a .com address.

Domains can be purchased through Cloudflare Registrar, Namecheap, or any registrar of your choice — happy to help with the setup once one is chosen.

4. Managing the Site Going Forward

Day-to-day content updates

Once live, updating the site does not require touching any code:

- Add or edit a service, gallery photo, testimonial, or FAQ answer through the admin panel's forms.
- Update your phone number, email, address, or social media links in one place, and they update everywhere on the site automatically.

Handling booking enquiries

Every submission through the Book Us form appears in the admin panel's Bookings section, protected by the same private login. From there, each enquiry can be marked New, Contacted, Confirmed, Completed, or Cancelled — giving a clear running list of who has reached out and where things stand with each one.

Ongoing support

Occasional updates, troubleshooting, or new features can continue to be handled on request — there's no obligation for anything beyond what's needed at the time.
